SpeedSharp for ZX

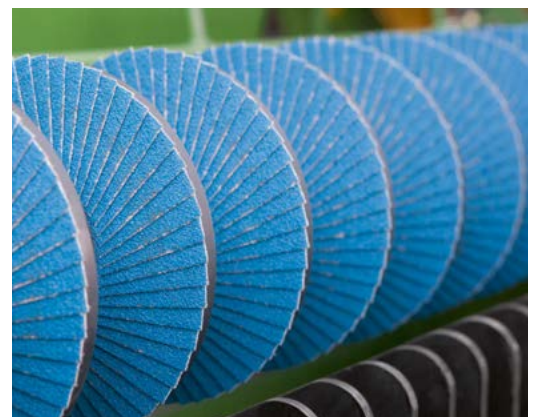

Fully automatic knife sharpener

- Grinds the full set of knives all at once
- Sharpens all knives uniformly
- Self-adjusting grinding discs adapt automatically to knife bevel angle
- Less abrasion, longer service life
- Great time savings
- No risk of fire by sparks flying under the forage wagon

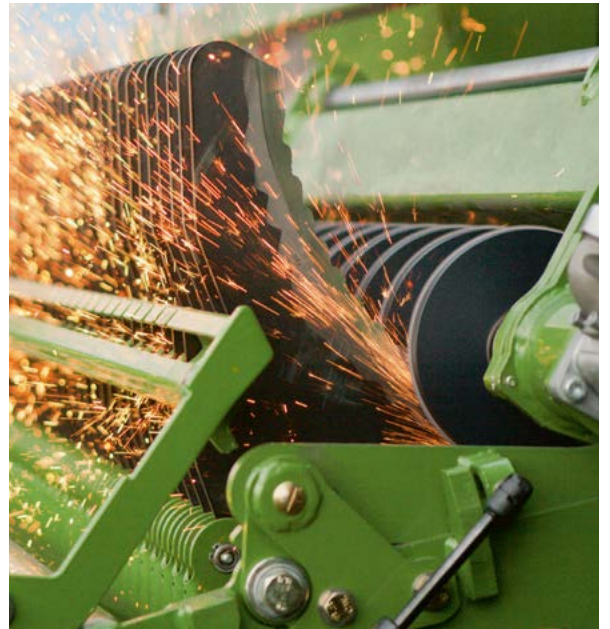

SpeedSharp is a fully automated knife grinder for the cutting system on the KRONE ZX dual-purpose forage wagons. The sharpener is made up of 23 grinding discs that are arranged on a hydraulically powered shaft which grind the full set of 46 knives in only two passes.

The flap discs with generously overlapping flaps warrant superior performance and longevity. Giving a 'cold' grind, they effectively protect the knives from annealing.

Your benefits

- The knives are always sharp
- Greater quality cuts
- Less input power
- Great time savings
- Higher-quality forage
- Greater harvesting efficiency
- Maximum dependability
- Easy, self-explanatory use

1. Coil springs press the discs onto the blades, thereby compensating for any blade wear and providing optimal sharpness at minimum abrasion.

2. The complete process takes only about four minutes – and that includes moving the knife bank out and back into position. As usual, swing the bank out to the side and conveniently inspect the knives and bank.

3. Fold up the grinding shaft and couple two oil hoses. Then press an external control to start grinding. The entire process takes place by the side of the machine, with sparks flying upward eliminating any risk of setting flammable underbelly material on fire. All movements and adjustments of the grinder are automated by an electronic sequence control system. There are no complex mechanics. The number of repeats (1-10) is selected on the terminal.
